

Our furniture solutions have been used by major organisations to fulfil a range of applications from control rooms to technical assembly areas and from news rooms to trading rooms.

We supply our customers with solutions rather than products. We can do this because we have extensive knowledge and experience founded in design and manufacture.

Think of a *shape*

Furniture solutions can be developed from either core components (as illustrated here), that can be adapted or we can develop complete customised solutions applying our design skills and manufacturing experience.

Leg frame components form the 'building-block' elements that can be developed into various desk and console solutions from a simple split-level workstation to a multi-screen console. Options are available for set-up adjustment, manually or electrically height adjustable mechanisms.

Our frame systems are based on tried-and-tested technology based around a height adjustable guidance system using needle rollers set inside a needle roller cage. Other benefits include the robust build quality of our solutions.

As our approach is different from mainstream furniture providers we have access to a wider choice of materials and manufacturing processes that you can benefit from with an almost infinite range of materials, colours and finishes.

Technical Furniture Solutions

ideas

Think of a console

Your customers can benefit from Ideas Limited's knowledge, experience and expertise in the design and supply of furniture solutions for technical applications including console workstations for multi-screen, multi-user and 24/7 working environments.

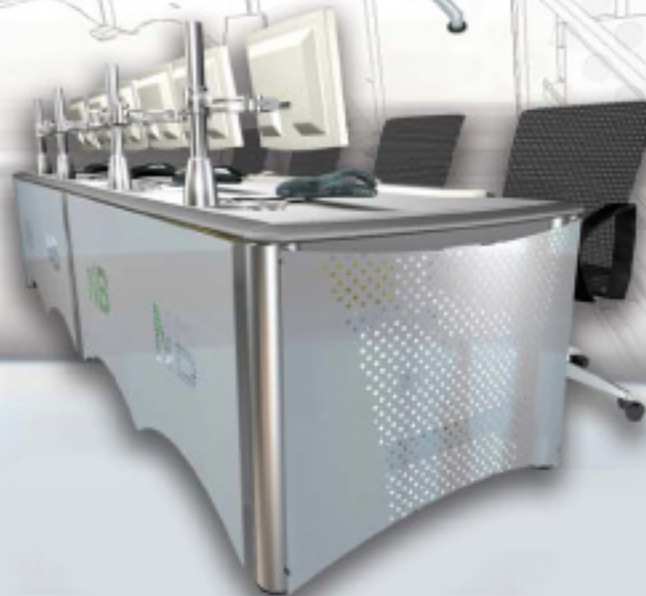

INSTALLATION EXAMPLES

Multi-screen console - electrically height adjustable with integral equipment bay.

Electrically height adjustable desk with 'specialised' shaped top.

Ideas Limited is a creative design authority specialising in technical furniture solutions. We are building on our experience and expertise working with major organisations in the IT, telecommunications, utilities and media sector as well as the emergency services.

Applications include:

- Control rooms**
- Network management centres**
- Trading Rooms**
- Technical Benches**
- Security-surveillance**
- News rooms**
- Post-production edit suites**

Unique Solutions for unique customers...

We are a truly customer-focused organisation. Every customer has different requirements based on their own business and operational needs. You can now benefit from 'customer-specific' solutions based on our knowledge and experience of 'mass-customisation' and 'network-production' without the restrictions associated with standardisation.

We are passionate about what we do and appreciate the success of any project is in the attention to detail integrating, technology, people and applications. We work closely with our customers and appointed specialists, often instigating the necessary joined-up thinking between the various project disciplines.

Ideas Limited work at a fast pace and supported by an experienced team of industrial designers and engineers, we can deliver solutions faster than many mainstream furniture manufacturers.

Anything is possible!

Because of our unique position customers can benefit from our technical capability in providing rapid design-development utilising IT systems - 3D modelling and computer aided design (CAD) enabling photo realistic presentations and production detail.
